

Deployment Guide Template

1. Introduction

1.1. Purpose

[Describe the purpose of this deployment guide.]

1.2. Scope

[Define the scope of deployment activities.]

1.3. Deployment Overview

[Provide a high-level deployment summary.]

2. System Requirements

Requirement Type	Details
Operating System	[Ubuntu / Windows Server / etc.]
CPU	[Minimum CPU Requirement]
RAM	[Minimum RAM Requirement]
Storage	[Required Disk Space]

3. Technology Stack

Component	Technology
Frontend	[React / Angular / Vue]
Backend	[FastAPI / Node.js / Spring Boot]
Database	[PostgreSQL / MongoDB]
Cloud Platform	[AWS / Azure / GCP]

4. Pre-Deployment Checklist

Checklist Item	Status
Environment Variables Configured	[]
Database Backup Completed	[]
Dependencies Installed	[]
SSL Certificates Configured	[]

5. Environment Configuration

Variable	Description	Example
PORT	[Application Port]	8000
DATABASE_URL	[Database Connection String]	[Value]

JWT_SECRET	[Authentication Secret]	[Value]
------------	-------------------------	---------

6. Deployment Steps

Step No.	Action	Description
1	Clone Repository	[Clone project source code]
2	Install Dependencies	[Install required packages]
3	Configure Environment	[Set environment variables]
4	Run Database Migration	[Execute migration scripts]
5	Start Application	[Launch application service]

7. Database Deployment

Task	Description
Migration	[Run migration commands]
Seeding	[Insert initial data]
Backup	[Backup existing database]

8. CI/CD Pipeline

Pipeline Stage	Description
Build	[Compile and package application]
Test	[Run automated tests]
Deploy	[Deploy to target environment]
Monitor	[Verify deployment health]

9. Rollback Procedure

Scenario	Rollback Action
Deployment Failure	[Revert to previous stable version]
Database Issue	[Restore backup and rollback migrations]

10.Security Considerations

Security Area	Implementation
HTTPS	[Enabled / Disabled]
Firewall	[Configured Rules]
Secrets Management	[Vault / Environment Variables]

11.Post-Deployment Validation

Validation Item	Expected Result
Application Health Check	[Application running successfully]
API Testing	[All endpoints responding correctly]
Database Connectivity	[Connection established successfully]

12.Troubleshooting

Issue	Possible Cause	Resolution
Application Not Starting	[Configuration Issue]	[Check logs and environment variables]
Database Connection Failed	[Invalid Credentials]	[Verify database configuration]

13.Conclusion

[Provide final deployment notes and recommendations.]
